## Introduction

Arthur I. Miller

The artist will be present.

## Weaving the Universe: From Atoms to Stars

originates from a unique collaboration between an artist and a scientist. It seeks to evoke the ambiguity and beauty of the cosmos in the large – black holes and wormholes – and in the small – atoms, electrons and light quanta – while exploring the human mind, the means by which we imagine these strange worlds.

There will be a lecture by Fiorella Lavado and Arthur I. Miller preceding the exhibition at 6 pm at the Robert-Koch-Forum Berlin.
